

KEY BENEFITS: REDUCED COSTS/LESS TIME

Problem

iRobot needed a cross-organizational data management strategy to enable a common, streamlined working environment and tool access for the entire design team.

Solution

Using Windchill and ThingWorx to enable a complete BOM for a parts-centric development process, giving stakeholders universal access to product data to complete projects more rapidly.

Impact

- Reduced design time by hours per design
- Faster process, reduced errors, and consistency across ECAD data
